Prostate cancer most often occurs in older men, but it can also occur in men as early as their forties.

OhioHealth recommends that men have a discussion with their physician about their risks, benefits and when to begin screening. Our prostate cancer screening recommendation guidelines follow the National Comprehensive Cancer Network (NCCN) guidelines that include:

- + A **baseline screening** for men ages **45–49**
- + **Screening consideration** for men ages **45–75** every one to two years
- + **Screening** only in healthy men older than age **75**
- + **Screening** only in men who have a **life expectancy beyond 10 years at any age**
